

The most effective web security for any location

Web security today requires the most advanced real-time defenses combined with ease of deployment, lower cost of operations, and the availability of a cloud security service.

Why is WebSense the best choice?

WebSense Cloud Web Security solutions analyze web content and detect threats with inline, real-time composite defense assessments within ACE (Advanced Classification Engine). The ThreatSeeker™ Network provides real-time updates for over 10,000 analytics to ACE classifiers.

Cloud service real-time defenses and granular policy controls

- Containment defenses analyze all inbound and outbound communications, blocking malware, command and control botnet communications, and data theft
- Industry-leading web security policy controls, time quotas, and social web controls with multiple authentication options for users and groups
- Social web controls include Facebook, Twitter, LinkedIn, YouTube, and others with operational controls within each cloud application
- HTTPS traffic inspection to detect threats and data theft, block proxy avoidance tools, and validate destination web services to avoid web scams

High availability, easy provisioning, and lower cost of operations

- Global operation centers with ISO27001 certifications provide high availability, easy provisioning, and lower costs for users in any location
- Connect entire networks, branch offices, retail locations, remote, and home users with no hardware provisioning
- Optionally, add TRITON Mobile Security for mobile device users

WebSense Cloud Web Security solutions extend to any location easily to provide unparalleled protection against today's threats.

PROTECTIONS

WEB EMAIL DATA

PLATFORMS

SOFTWARE APPLIANCE CLOUD HYBRID

Reduce costs and complexity

- Eliminate the costs of buying, deploying, upgrading, and maintaining on-premise hardware and software
- Integrate easily with existing network infrastructure
- Cover distributed and roaming users with no additional complexity or administrative overhead
- Increase availability and scalability

Proven service superiority

- 99.999% uptime; an industry-leading Service Level Agreement
- ISO 27001-certified cloud infrastructure with over a decade of experience and investment
- Global carrier-grade datacenters
- 24 x 7 x 365 staffing
- Physical intrusion detection systems
- Video surveillance
- Restricted access lists
- Photo and biometric verification
- Datacenters located across the globe

“With WebSense Cloud Web Security, when I make a change, it’s immediately effective throughout whichever branches I choose.”

- Allied Cash

The Websense difference is ACE: the Advanced Classification Engine

Real-time inline contextual defenses for web, email, data, and mobile security within ACE use composite risk scoring and real-time analytics to deliver the most effective security available. ACE provides containment by analyzing inbound and outbound traffic with data-aware defenses for data theft protection. Classifiers within ACE for security, data, and content analysis have been developed with years of research and development and are proven daily to detect more threats than traditional anti-virus engines with public facing results within the Websense Labs website. The TRITON architecture uses ACE within all products as a primary defense, plus within the ThreatSeeker Network uniting over 850 million end points and analyzing 3-5 billion requests per day.

The Websense Cloud Web Security Gateway uses ACE analytics detect threats in real time.

Your needs	Websense solution
Real-time protection against advanced malware	Leverages the Websense Advanced Classification Engine (ACE), going beyond antivirus defenses to provide contextual awareness, composite risk scoring, and multi-layered, real-time analysis of web content.
Prevent malware from entering your network and stealing your data	Scans and analyzes social media sites and content in real time to prevent malware and advanced attacks from entering your network and stealing data or damaging your brand. Secure your remote users with or without endpoint software. Includes an optional lightweight, tamper-resistant client that combines strong web security service enforcement with transparent authentication of users connecting to Websense cloud infrastructure.
Empower the social web, but control inappropriate content automatically	Websense social web controls provide the flexibility to allow Facebook access but prohibit posting content or playing games, or allow access to LinkedIn, but prevent job searches.
Easily add new capabilities, like Websense Email Security, when the time is right	Websense Cloud Web Security Gateway and Websense Cloud Email Security are integrated at every level. A single user interface configures both, and both leverage shared management services including user directory synchronization, delegated administration, reporting, account management, and more.
Seamlessly manage multiple sets of credentials for enterprise applications	The Websense Authentication Service provides transparent, clientless authentication to office and roaming users connecting to Websense cloud infrastructure to transparently authenticate users on multiple systems.
Spend less time on web security	Websense Cloud Web Security Gateway reduces business costs and complexity because it is delivered as a service. Everything from processing to hardware to maintenance is managed by Websense. Blocking threats at the gateway gives time back to IT to focus on other projects.
Manage and monitor activity and performance at any time	Websense Cloud Security includes an intuitive, web-based console that integrates all management and reporting capabilities.

websense®
TRITON™

Mobile, social, and cloud technologies drive productivity. But they also open the door to data theft and advanced attacks that can slip right by antivirus and firewall defenses. Websense® TRITON™ solutions keep you a step ahead with best-of-breed web, email, and DLP security (available together or separately). Shared analytics, flexible deployment options, and a unified management console make TRITON solution the must-have solution for today's dynamic environments.
